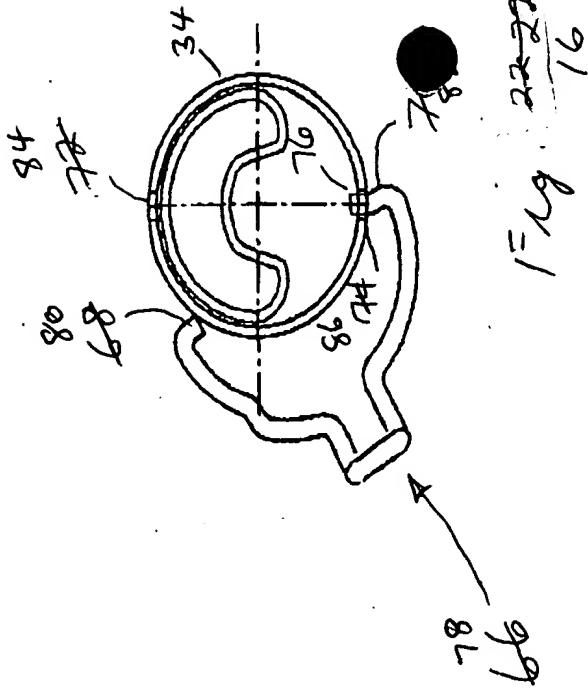

Fig. 26 16

A high-contrast, black and white image of a semi-circular, metallic object, possibly a helmet or a large coin, with a central circular feature and a small protrusion. The object is shown against a dark background, with the metallic surface reflecting light in a way that creates a bright, almost white, semi-circular arc on the left side. The central circular feature is a small, raised ring or button. A small, rectangular protrusion is visible on the right side of the object. The overall appearance is that of a highly polished, reflective metal.
